---

Work/investigation of the FTP problem has been completed. Our problem is we are operating from a provider (Hobby Million Air FBO) on their corporate server. We are pushing so much data that we have been classified as a DDOS. We are working to get in touch with the corporate IT folks to fix the problem. I will let you know how this goes.

There is nothing wrong with our FTP sites. It turns out it the circuit being used to move the data (the FBO) is causing the problem.

We are working on it.
